

Urban Green

HYDROPONICS

Automated Home Aquaponics

Hydroponics is a way of cultivating fruits and vegetable by using water fertilized by fish waste. The whole process represents a perfectly balanced ecosystem. By using this method, the growth rate of your crops can be increased by 50 - 75 percent. Our product offers additional features like:

Realtime monitoring (24/7) to know the exact needs of your ecosystem

Controll your system by adjusting the heating and changing light intensity and -frequency

Access your data everytime at every place with our user friendly webinterface
